

## IAPP Certification Exams

### CIPP/E Exam Updates Effective July 1, 2021

To stay current with changes in the privacy landscape, the IAPP annually updates our certification exams. These updates include previously untested questions that cover the same content in different ways, but can also include new topics, laws and regulations our Exam Development Boards have identified as important additions. While updates that include new content account for only 10% of the exam, candidates testing July 1 and after should prepare for questions on the topics listed under each designation below.

New versions of the body of knowledge and exam blueprint will also be effective July 1 and can be found [here](#) under “Certification - Free Resources.”

#### CIPP/E Updates

This year’s changes resulted in minimal additions to the CIPP/E body of knowledge, and the exam blueprint reflects these updates. The number of exam questions did not change.

#### The following new topics have been added to the BoK:

- Machine learning.
- Ethics related to AI.
- Transfer impact assessments.

If you have questions about these updates or other exam related questions, do not hesitate to [contact us](#).
